

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-46 (canceled)

Claim 47 (new) An apparatus for determining a condition of a region of a tissue sample, the apparatus comprising:

illuminating optics for illuminating a region of a tissue sample with electromagnetic radiation incident at a first angle and for illuminating the region of the tissue sample with electromagnetic radiation incident at a second angle;

collecting optics for collecting electromagnetic radiation from the region of the tissue sample; and

a processor adapted to determine a condition of the region of the tissue sample using representative data selected from at least one of:

a first set of spectral data corresponding to the collected radiation from the region during illumination with radiation incident at the first angle; and

a second set of spectral data corresponding to the collected radiation from the region during illumination with radiation incident at the second angle.

Claim 48 (new) The apparatus of claim 47, wherein the processor is further adapted to select the representative data based at least in part on a subset of the first set of spectral data and a subset of the second set of spectral data.

Claim 49 (new) The apparatus of claim 47, wherein the first set of spectral data comprises reflectance spectral data and the second set of spectral data comprises reflectance spectral data.

Claim 50 (new) The apparatus of claim 47, wherein at least one of the first set of spectral data and the second set of spectral data comprises fluorescence spectral data.

Claim 51 (new) The apparatus of claim 47, wherein the condition is a state of health.

Claim 52 (new) The apparatus of claim 51, wherein the state of health comprises at least one of the conditions of normal squamous tissue, metaplasia, CIN I, CIN II, CIN III, CIS, and cancer.

Claim 53 (new) The apparatus of claim 47, wherein the tissue sample comprises at least one of the group consisting of colorectal, gastroesophageal, urinary bladder, lung, and skin tissue.

Claim 54 (new) The apparatus of claim 47, wherein the tissue sample comprises cervical tissue.

Claim 55 (new) The apparatus of claim 47, wherein the tissue sample comprises epithelial cells.

Claim 56 (new) An apparatus for determining whether spectral data obtained from a region of a tissue sample are affected by an artifact, the apparatus comprising:
 illuminating optics for illuminating a region of a tissue sample with electromagnetic radiation incident at a first angle and for illuminating the region of the tissue sample with electromagnetic radiation incident at a second angle;
 collecting optics for collecting electromagnetic radiation from the region of the tissue sample; and
 a processor adapted to:
 obtain a first set of spectral data corresponding to collected radiation from the region during illumination of the region with radiation incident at the first angle;

obtain a second set of spectral data corresponding to collected radiation from the region during illumination of the region with radiation incident at the second angle; and

determine whether the first set of spectral data is affected by an artifact based at least in part on a subset of the first set of spectral data and a subset of the second set of spectral data.

Claim 57 (new) The apparatus of claim 56, wherein the artifact comprises a lighting artifact.

Claim 58 (new) The apparatus of claim 57, wherein the lighting artifact comprises glare.

Claim 59 (new) The apparatus of claim 57, wherein the lighting artifact comprises shadow.

Claim 60 (new) The apparatus of claim 56, wherein the artifact comprises an obstruction.

Claim 61 (new) The apparatus of claim 60, wherein the obstruction comprises blood.

Claim 62 (new) The apparatus of claim 60, wherein the obstruction comprises a portion of at least one member of the group consisting of a speculum and a smoke tube.

Claim 63 (new) The apparatus of claim 60, wherein the obstruction comprises mucus.

Claim 64 (new) The apparatus of claim 56, wherein the first set of spectral data comprises reflectance spectral data and the second set of spectral data comprises reflectance spectral data.

Claim 65 (new) The apparatus of claim 56, wherein the processor is further adapted to obtain a third set of spectral data, and wherein the third set of spectral data comprises fluorescence spectral data.

Claim 66 (new) The apparatus of claim 56, wherein the processor is adapted to determine whether the first set of spectral data is affected by an artifact by computing a difference between R_1 , a member of the first set of spectral data, and R_2 , a member of the second set of spectral data, and comparing the difference to a constant, where R_1 and R_2 correspond to at least approximately identical wavelengths.

Claim 67 (new) The apparatus of claim 66, wherein the difference is a percent difference.

Claim 68 (new) An apparatus for determining whether spectral data corresponding to a region of a tissue sample is affected by an artifact, the apparatus comprising:

- illuminating optics for illuminating a region of a tissue sample with electromagnetic radiation incident at a first angle and for illuminating the region of the tissue sample with electromagnetic radiation incident at a second angle;
- collecting optics for collecting electromagnetic radiation from the region of the tissue sample; and
- a processor adapted to:
 - obtain a first set of reflectance spectral data corresponding to collected radiation from the region during illumination of the region with radiation incident at the first angle;
 - obtain a second set of reflectance spectral data corresponding to collected radiation from the region during illumination of the region with radiation incident at the second angle;
 - obtain a set of fluorescence spectral data corresponding to the region; and
 - determine whether any of the first set of reflectance spectral data, the second set of reflectance spectral data, and the set of fluorescence spectral data are affected by an artifact based at least in part on at least one of the following:

- a subset of the first set of reflectance spectral data;
- a subset of the second set of reflectance spectral data; and
- a subset of the set of fluorescence spectral data.

Claim 69 (new) An apparatus for determining a characteristic of a region of a tissue sample, the apparatus comprising:

illuminating optics for illuminating a region of a tissue sample with electromagnetic radiation at a first angle and for illuminating the region of the tissue with electromagnetic radiation incident at a second angle;

collecting optics for collecting electromagnetic radiation from the region of the tissue sample; and

a processor adapted to:

obtain a first set of reflectance spectral data corresponding to collected radiation from the region during illumination of the region with radiation incident at the first angle;

obtain a second set of reflectance spectral data corresponding to collected radiation from the region during illumination of the region with radiation incident at the second angle;

determine whether at least one of the first set of reflectance data and the second set of reflectance data is affected by an artifact based at least in part on a subset of the first set of reflectance data and a subset of the second set of reflectance data;

reject at least one member of at least one of the first set of reflectance data and the second set of reflectance data determined to be affected by the artifact; and

determine a characteristic of the region of the tissue sample based at least in part on at least one member of at least one of the first set of reflectance data and the second set of reflectance data not rejected.

Claim 70 (new) The apparatus of claim 69, wherein the processor is further adapted to obtain a set of fluorescence spectral data corresponding to collected radiation from the region, and to determine the condition of the region of the tissue sample based at least in part on at least one member of at least one of the first set of reflectance data and the second set of reflectance data and at least one member of the set of fluorescence spectral data.
